Claim: Lopinavir / ritonavir have exhibited favorable clinical responses when used as a treatment for coronavirus.

Supports: The 54-year old male is the third patient diagnosed with COVID-19 in Korea... Interestingly, after lopinavir/ritonavir (Kaletra, AbVir) was administered, β -coronavirus viral loads significantly decreased and no or little coronavirus titers were observed.

Refutes: The **revised drug repurposing of known approved drugs (such as lopinavir/ritonavir) has been reported failed for curing SARS-CoV-2 infected patients.** It is argued to generate new chemical entities against this virus.

Wrong context: There are no approved treatments for MERS-CoV infection although a combination of lopinavir, ritonavir and interferon beta... In mice, both prophylactic and therapeutic RDV improve pulmonary function and reduce lung viral loads and severe lung pathology.

Claim: The coronavirus cannot thrive in warmer climates.

Supports: ...most outbreaks display a pattern of clustering in relatively cool and dry areas... This is because the environment can mediate human-to-human transmission of SARS-CoV-2, and unsuitable climates can cause the virus to destabilize quickly...

Refutes: ...significant cases in the coming months are likely to occur in more humid (warmer) climates, irrespective of the climate-dependence of transmission and that summer temperatures will not substantially limit pandemic growth.
